

Quantitative spectroscopy of several tropospheric or stratospheric molecules: recent updates performed in the GEISA database

Agnés Perrin

Agnes.Perrin@lisa.univ-paris12.fr

Laboratoire Interuniversitaire des Systèmes Atmosphériques
LISA-UMR7583 CNRS/ Univ Paris 12 et Paris Diderot
61 Av. du Général de Gaulle , 94010 Créteil cedex, France

Excellent results achieved by IASI for trace gas retrievals.

- **CO, ozone, CH₄, CO₂** , are now measured
- **Ammonia (NH₃): NH₃ is now measured by IASI (Clarisse, Clerbaux, Dentener, Hurtmans, Coheur, Nature Geoscience, 2009.**
- **Tracking and quantifying volcanic SO₂ is possible.** L. Clarisse, P. F. Coheur, A. J. Prata, D. Hurtmans, A. Razavi, T. Phulpin, J. Hadji-Lazaro, and C. Clerbaux
- **O₃: Numerous papers** (Talks from Scannell, Dufour, Coman...& posters)
- **Nitric acid (HNO₃) Talk by Wespes et al.)**
- **Formic acid (HCOOH):** talk from Razavi et al.

Goal of this study

- To suggest **new molecules** which could – possibly ?? – be measured by IASI
- For this purpose, it is necessary to propose the best possible spectroscopic parameters

Spectroscopy ???

- High resolution spectra recorded in laboratory
- Well defined experimental conditions
- Accurate theoretical model used to reproduce the line intensities and positions

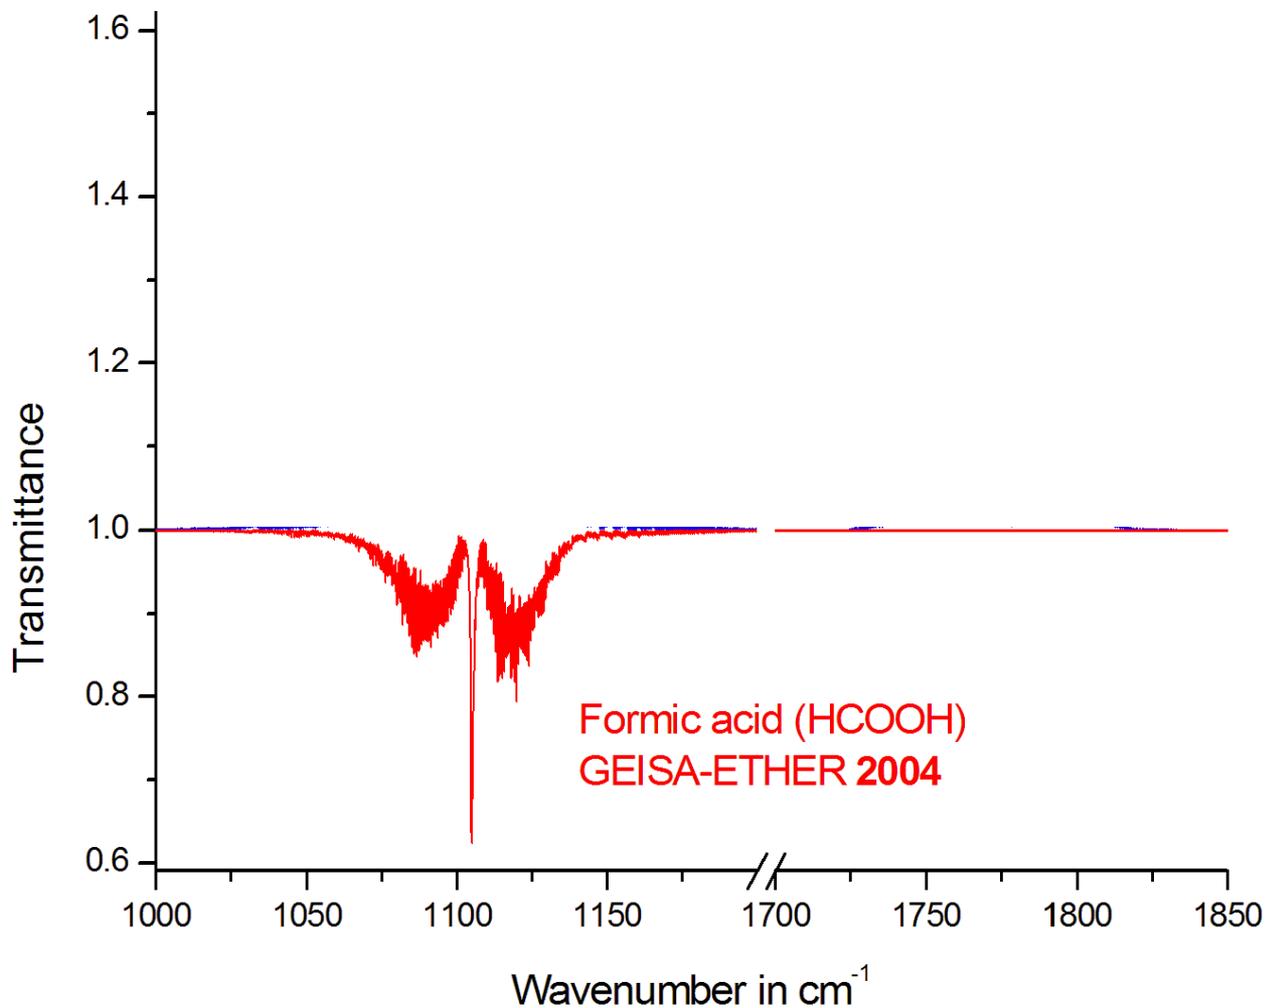

Formic acid (*trans*-HOOH)

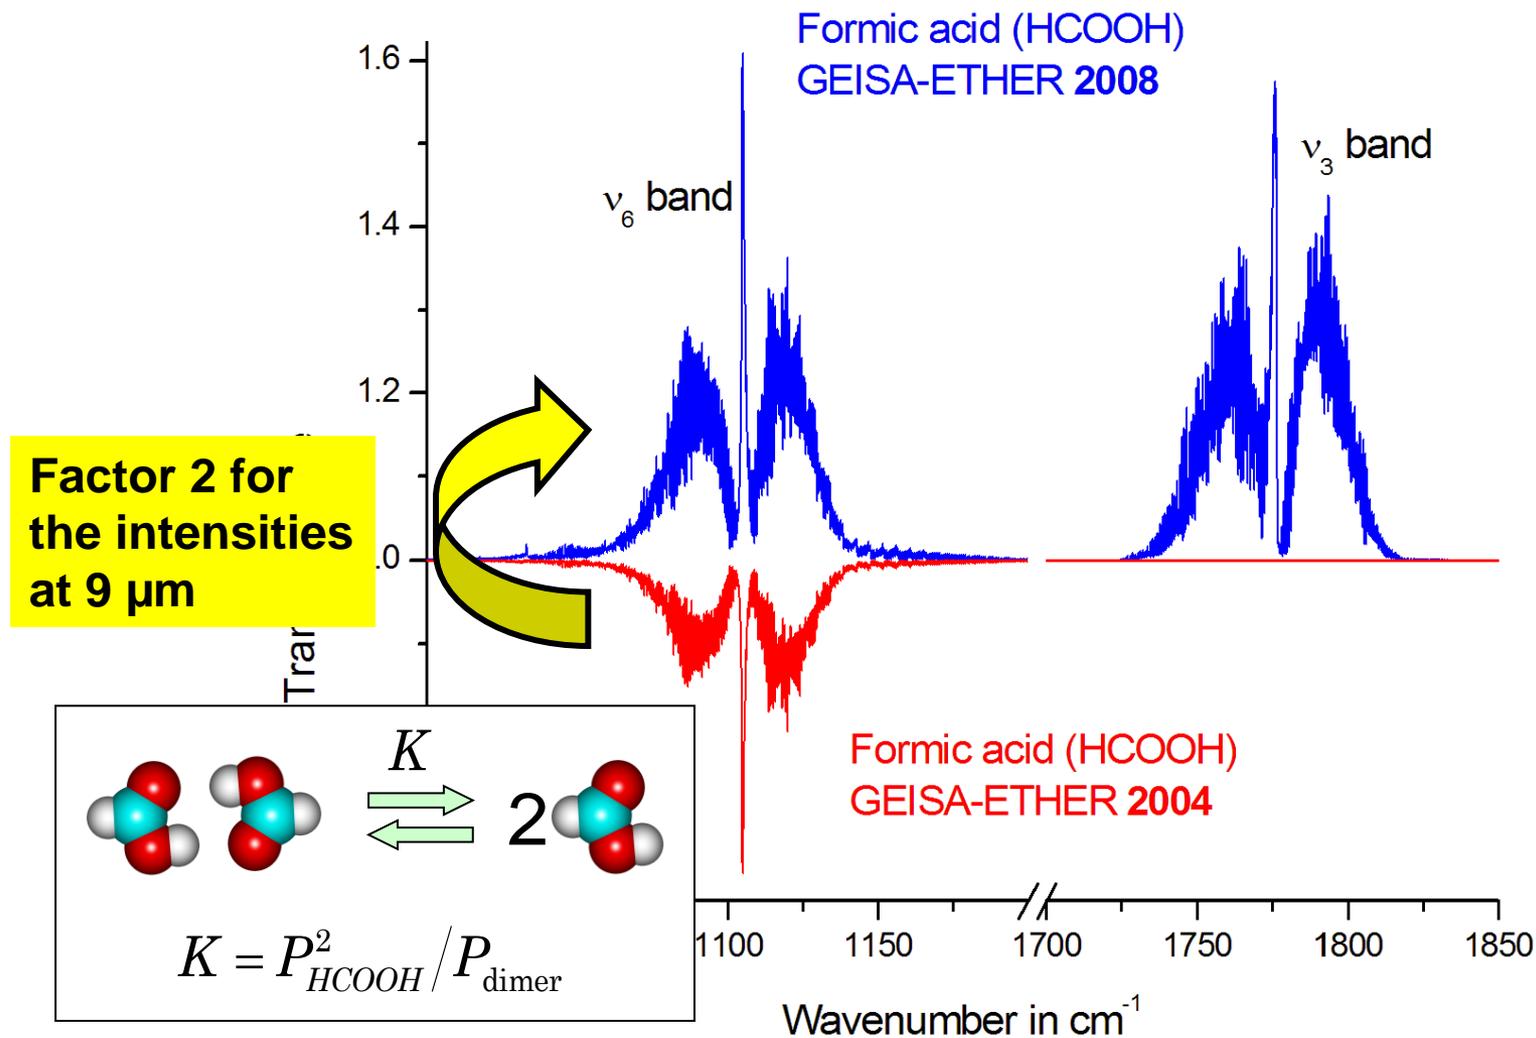

Thursday talk:

Razavi, Karagulian, Clarisse, Hurtmans,
Coheur, Clerboux, Stravrakov, Müller

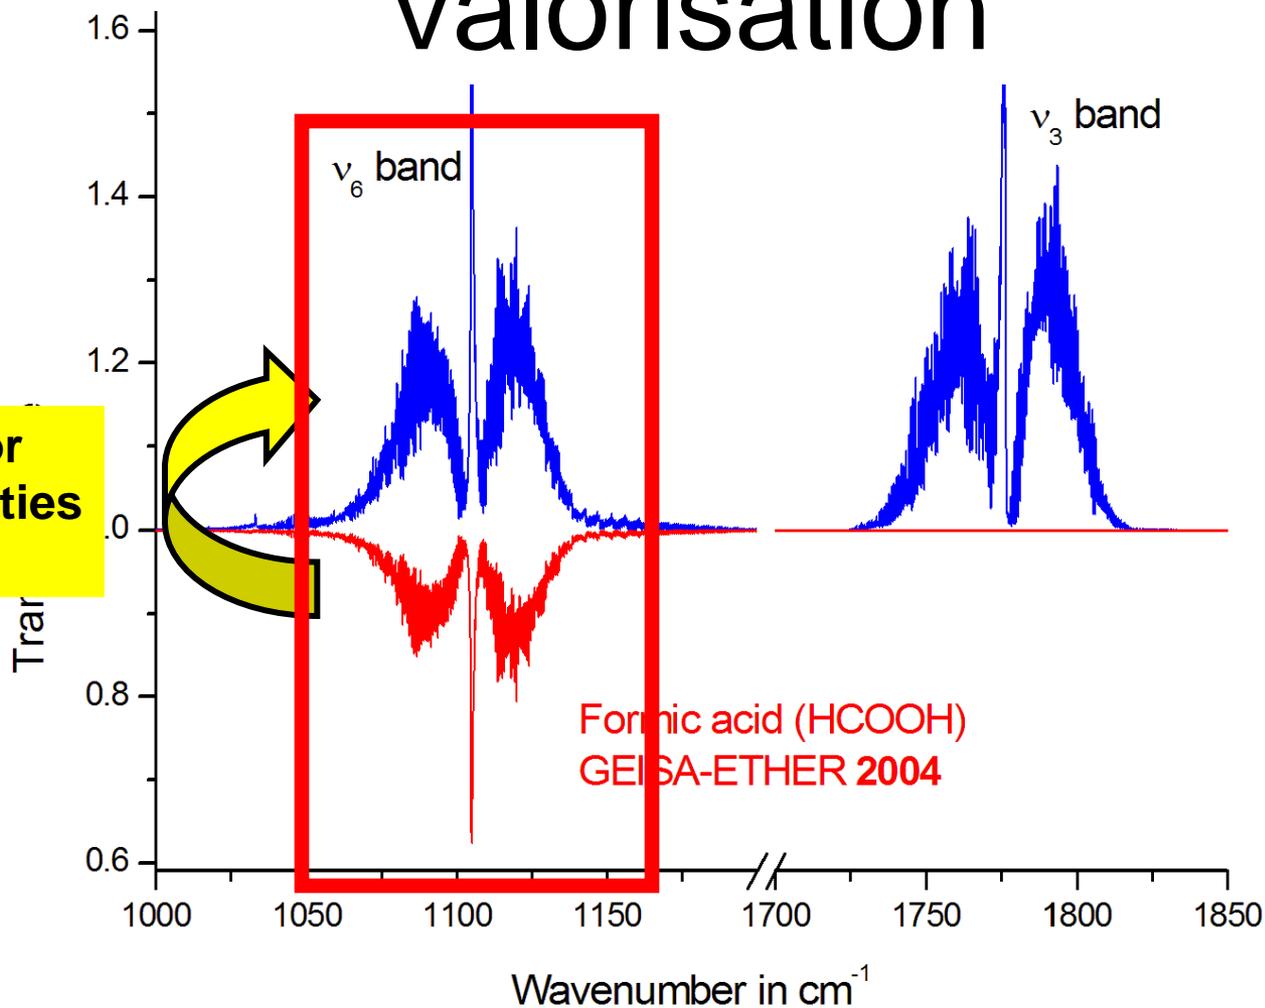

January 25-29, 2010

IASI, Annecy,

Valorisation

Factor 2 for
the intensities
at 9 μm

Valorisation for the 9 μm band of HCOOH (ν_6 band)

- In the **new database** the **intensities** are about **two times stronger** than the previous one
- With this **new database** the **retrieved HCOOH are about two times weaker** than with the previous version
- The new database is now used by *Zander et al* \$ for the retrieval of formic acid above the **Jungfraujoch**
- Evaluation of **daytime**, **day to day variability**, **diurnal** and **seasonal modulation**, inter annual variations during the **1985-2007 period**.
- They perform a new **re-analysis** of the « **old** » **measurements** 1985-2006 using the **new spectroscopic database** (instead of the old one)

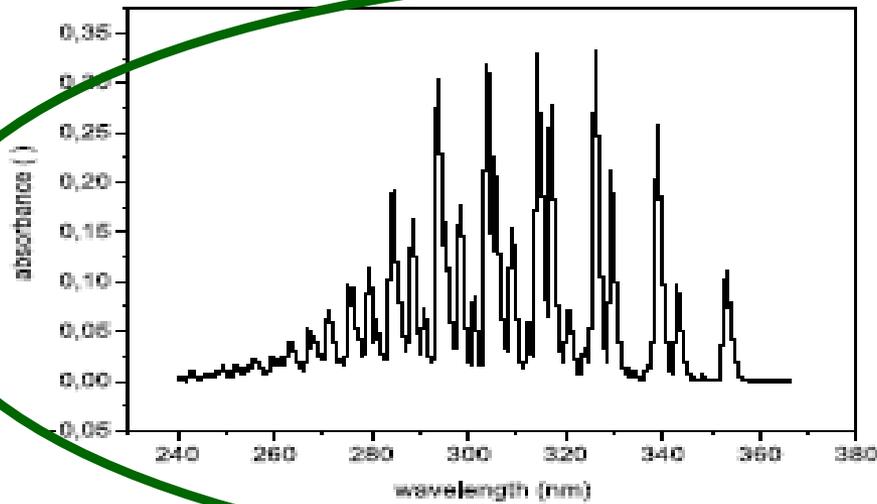

\$ Zander, Duchatelet, Mahieu, Demoulin, Roland, Servais, Vander Auwera, Perrin, Rinsland & Crutzen, *paper in preparation*

CONNAISSANCE
ACTION

Linelists for both molecules are now available

Line by line model at LISA
 — v_2 band H_2CO
 — v_3 band $HCOOH$

$HCOOH$ and H_2CO can be retrieved simultaneously

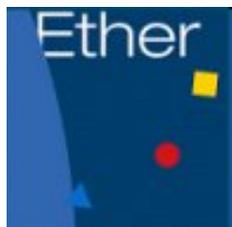

Herndon, Zahniser, Nelson Jr., Shorter, McManus, Jiménez, Warneke, & de Gouw, “Airborne measurements of H_2CO and $HCOOH$ during the New England Air Quality Study 2004 using quantum cascade laser spectrometer » , J. Geophys. Res. D112, D10S03, doi:10.1029/2006JD007600, 2007

Databases

January 25-29, 2010

IASI, Annecy,

All our results (H_2CO , HNO_3 , HCOOH , ...) were communicated to

GEISA on Ether

<http://ether.ipsl.jussieu.fr/etherTypo/?id=977&L=0>

Nicole Jacquinet

An article is under preparation (Nicole Jacquinet Husson & co workers)

Our results were also communicated to

HITRAN: High resolution TRANsmission
molecular database

<http://cfa-www.harvard.edu/HITRAN/>

Thanks to the authors of this work

- **Formaldehyde (H_2CO) line lists:** D.Jacquemart, F.Kwabia-Tchana & N.Lacome (LISA & LADIR)
- **H_2CO cross sections measurements:** Gratien, Picquet-Varrault, Orphal, Perraudin, Doussin & J.M.Flaud (LISA)
- **H_2CO in ACE-FTS:** G.Dufour, Szopa, Barkley, Boone, Palmer, Bernath
- **H_2CO on MIPAS** Steck, N. Glatthor, T. von Clarmann, H. Fischer, J.-M. Flaud, B. Funke, U. Grabowski, M. Höpfner, S. Kellmann, A. Linden, A. Perrin, and G. P. Stiller
- **Formic acid ($HCOOH$):** J.Vander Auwera Didriche (ULB-Brussels)

Finally, we would like to thank **CNES**.

& the LEFE-CHAT « Les Enveloppes Fluides et l'Environnement Chimie ATmosphérique » of « Institut national des sciences de l'Univers » (*INSU*) for financial support. .
